

AK B1 that occurs naturally in the plant genome, wherein said geminivirus silencing vector silences expression of the endogenous plant gene upon introduction into a plant cell.

sub C2
A3 4. (Amended) A vector according to claim 3, wherein said promoter is the promoter that is associated with said endogenous plant gene.

5. (Amended) A vector according to claim 3, wherein said promoter is the geminivirus coat protein promoter.

6. (Amended) A vector according to claim 1, wherein said heterologous DNA is in the sense orientation.

A4 B2 8. (Amended) A vector according to claim 1, wherein said heterologous DNA has at least 60% sequence similarity to a fragment of said endogenous plant gene.

9. A vector according to claim 1, wherein said heterologous DNA has at least 60% sequence similarity to the entire coding region of endogenous plant gene.

A5 11. (Amended) The vector of claim 1, wherein expression of said heterologous DNA modifies a plant phenotypic trait.

Sub B3 12. (Amended) A DNA construct comprising a geminivirus genome, wherein the DNA encoding the geminivirus coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to an endogenous plant gene that occurs naturally in the plant genome.

a6
16. (Amended) A DNA construct according to claim 12, wherein said heterologous DNA is in the sense orientation.

a7
B4
18. (Amended) A DNA construct according to claim 12, wherein said heterologous DNA has at least 60% sequence similarity to a fragment of said endogenous plant gene.

19. (Amended) A DNA construct according to claim 12, wherein said heterologous DNA has at least 60% sequence similarity to the entire coding region of said endogenous plant gene.

OB
21. (Amended) The DNA construct of claim 12, wherein expression of said heterologous DNA modifies an observable plant phenotypic trait.

a9
31. (Amended) A plant cell comprising a geminivirus silencing vector according to claim 1.

Please add the following new claims.

Sub 35
a10
36. A geminivirus silencing vector comprising a geminivirus genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a fragment of a gene endogenous to a plant, wherein the heterologous DNA sequence is inserted into the silencing vector in the sense orientation, and wherein said geminivirus silencing vector silences expression of the endogenous plant gene upon introduction into a plant cell.

37. The vector according to claim 36, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub 136
38. A geminivirus silencing vector comprising a geminivirus genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a gene endogenous to a plant, wherein the heterologous DNA sequence is inserted into the silencing vector in the antisense orientation, and wherein said geminivirus silencing vector silences expression of the endogenous plant gene upon introduction into a plant cell.

39. The vector according to claim 38, wherein said gene endogenous to a plant occurs naturally in the plant genome.

A 10 sub 37
40. A DNA construct comprising a geminivirus genome, wherein the DNA encoding the geminivirus coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to a gene endogenous to a plant, and wherein the heterologous DNA sequence is inserted into the silencing vector in the antisense orientation.

41. The DNA construct according to claim 40, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub 38
42. A geminivirus silencing vector comprising a Tomato Golden Mosaic Virus (TGMV) genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a gene endogenous to a plant, wherein said geminivirus silencing vector silences expression of the endogenous plant gene upon introduction into a plant cell.

43. The vector according to claim 42, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub 39
44. A geminivirus silencing vector comprising an African Cassava Mosaic Virus (ACMV) genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a gene

B9
correct

endogenous to a plant, and wherein said geminivirus silencing vector silences expression of the endogenous plant gene upon introduction into a plant cell.

45. The vector according to claim 44, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub B10
A10

46. A DNA construct comprising a Tomato Golden Mosaic Virus (TGMV) genome, wherein the DNA encoding the TGMV coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to an endogenous plant gene.

47. The DNA construct according to claim 46, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub B11

48. A DNA construct comprising an African Cassava Mosaic Virus (ACMV) genome, wherein the DNA encoding the ACMV coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to an endogenous plant gene.

49. The DNA construct according to claim 48, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub B10

50. A method of silencing the expression of an endogenous plant gene in a plant cell, comprising inoculating said plant cell with a geminivirus silencing vector comprising a geminivirus genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a gene endogenous to a plant.

51. The method according to claim 50, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub B13

52. A method of silencing the expression of an endogenous plant gene in a plant cell, comprising inoculating said plant cell with a DNA construct comprising a geminivirus genome, wherein the DNA encoding the geminivirus coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to an endogenous plant gene.

53. The method according to claim 52, wherein said gene endogenous to a plant occurs naturally in the plant genome.

54. A method of systemically silencing expression of an endogenous plant gene in a plant, comprising inoculating said plant cell with a geminivirus silencing vector comprising a geminivirus genome which contains heterologous DNA, said heterologous DNA having at least 60% sequence similarity to a gene endogenous to a plant.

55. The method according to claim 54, wherein said gene endogenous to a plant occurs naturally in the plant genome.

Sub B15

56. A method of systemically silencing expression of an endogenous plant gene in a plant, comprising inoculating said plant cell with a DNA construct comprising a geminivirus genome, wherein the DNA encoding the geminivirus coat protein has been replaced in part or in total with heterologous DNA having at least 60% sequence similarity to an endogenous plant gene

57. The method according to claim 56, wherein said gene endogenous to a plant occurs naturally in the plant genome.

58. The vector of claim 11, wherein expression of said heterologous DNA modifies a plant phenotypic trait that can be visually observed.
